Put a fresh face forward

Pellevé precisely heats the deep layers of your skin using advanced radiofrequency energy without damaging the epidermis, or top layer. The heat causes the existing collagen in your skin to contract and tighten. Also after the treatment, your skin will start to produce new collagen. The result is an improvement in skin tightness* and wrinkles you can see and feel.

Pellevé can be used to treat the skin on the face, including:

- Nasolabial folds
- Wrinkles around the mouth
- Lines or folds between the eyebrows
- Lines on the forehead
- Loose skin above or below the eye
- Crow's feet

Results you can see in just a few treatments

Although many people start to see results immediately after the first treatment, most patients begin with a package of 3-4 treatments spaced about 30 days apart. Your doctor will recommend the right number of treatments for you.

Frequently asked questions

Q: How is Pellevé different from other skin tightening treatments?

A: Pellevé has been proven to provide safe and effective skin tightening* in medical studies. Because Pellevé is a non-invasive procedure, meaning no surgery is required, there are minimal side effects and discomfort. Unlike other systems, no anesthesia or skin cooling is needed during your Pellevé procedure, so you can return to home or work immediately following treatment.

Q: What should I expect during the procedure?

A: You will feel a deep warming sensation each time the Pellevé handpiece touches the area being treated. Because no anesthetic is required, you'll be able to describe the depth of the heat to your doctor, which will help to ensure the best possible results.

Q: How long does a Pellevé procedure take?

A: Your Pellevé procedure will typically take about 45 to 60 minutes for a full facial treatment. Because Pellevé doesn't require anesthesia or downtime, it fits easily into your busy schedule.

* via soft tissue coagulation

Q: What should I expect afterwards?

A: You should expect to be able to return to your daily activities with no downtime at all. Unlike lasers, there is no restriction from being in the sun and you can also apply makeup immediately after the procedure. Some patients experience mild swelling and redness which typically goes away within 2 to 24 hours.

Feel refreshed.

For the best results, it is important to choose a practice that is experienced in administering Pellevé®.

**To find more information on
Pellevé visit www.pelleve.com**

Pellevé is indicated for the non-ablative treatment of mild to moderate facial wrinkles for all skin colors. Possible side effects of Pellevé are usually treatment-site related and include mild discomfort during the procedure within the treatment area. Mild swelling (edema) and redness (erythema) may occur during or after a Pellevé skin treatment. Talk to your doctor to see if Pellevé is right for you.
