SculpSure®

Redefine
your shape

SculpSure helps you safely reduce stubborn fat in problem areas such as the belly, love handles, back, inner and outer thighs, with a treatment plan that's customized to your desired results.

How does SculpSure® work?

Laser targets and heats fat cells under the skin without affecting the skin's surface.

SculpSure raises the temperature of fat cells damaging their structural integrity. Contact Cooling™ stays on throughout the treatment, which keeps the skin safe and comfortable.

The damaged fat cells are removed naturally from your body through your lymphatic system.

Once the fat cells are removed from your body they cannot regrow.

IS SCULPSURE RIGHT FOR ME?

SculpSure is ideal for people with stubborn areas of fat, particularly those that seem resistant to diet and exercise.

HOW MANY TREATMENTS WILL I NEED?

Every patient is different. Most patients see the best results when they have a series of treatments. Ask your treatment provider about the treatment plan that is right for you.

WHAT SHOULD I EXPECT DURING THE TREATMENT?

Most patients feel a tingling sensation intermittently throughout the treatment which is generally well-tolerated.¹

HOW LONG BEFORE I CAN RESUME NORMAL ACTIVITIES?

There is no recovery period or downtime with SculpSure, so you can have the treatment and return to normal activities immediately.

WHEN WILL I SEE RESULTS?

Patients may start to see results as early as 6 weeks following treatment as the body begins to evacuate the destroyed fat cells, with optimal results usually seen at 12 weeks.

Customized treatments to meet your desired goals
